

"Rollerbed Systems' capabilities will meet or exceed your requirements."

Manual T-Bar & Strap

The Rollerbed Systems' Manual T-Bar and Strap can be used to unload a vehicle full of pallets in a matter of minutes. Before loading place the Manual T-Bar inside the vehicle at the front bulkhead and lay the strap down the center line to the rear doors. The first two pallets must be placed side by side ensuring the T Bar is engaged between the pallet slats. Thereafter all remaining pallets are loaded in the conventional manner, simply ensuring the yellow strap is still on the center line and not trapped by a pallet.

To unload, simply hook the strap to a fork lift truck or winch and pull the T Bar together with the pallets to the rear of the vehicle. The pallets can also be pulled onto an external level floor that is at the same height as the vehicle internal floor. To facilitate the unloading, it is advisable to cover the vehicle floor with sheet steel.

The strap and T-Bar are rated at 10,000 pounds.
